Hip Arthroscopy, Surgery for Athletes

Referring Doctor

Dr Carol ANGELONI
Manjimup Medical Centre
P O Box 138
MANJIMUP WA 6258

Patient

Ms Ferenze POTITO
17 O'Connor St
Manjimup WA 6258
DOB: 21/04/56
Claim No.: G732742D

15/02/24

Dear Dr ANGELONI,

Diagnosis: 5 Months Post Right Shoulder Arthroscopic Cuff Repair + Lateral Clavicle Excision

Plan: Doing Very Well; Excellent Outcome
Only Review if Required (I'm happy to undertake PIA at 12 months if needed)

Findings

Flexion: 170 Cuff: Excellent
ER: 45 IR: T10

Scores:

Strength: Excellent

Visual Pain Score: 0

Progress

Ferenze continues to do really well. Range of motion and strength are approaching normal, and Outcome Scores shown above are impressive. I couldn't be happier with how things have gone after surgery, and given how much she was struggling pre-op, this really is a fabulous outcome.

Although rehab and improvement should continue for 6-12 months post op, we can already consider surgery a success. We haven't organised another appointment at this stage however I'll keep abreast of the outcome scores which will continue for 2 years, and I'm certainly happy to touch base at any point moving forward.

Kind regards,

A/Prof Peter D'Alessandro
