Dear Dr Guzenko

Re: Mrs Selina Grimes - DOB: 14/03/1966
2 Royal Street UPPER FERNTREE GULLY 3156

MRI BRAIN

Clinical Notes:
Left hand numbness. CT brain performed elsewhere. Suspected SOL.

Findings:
Reference made to the CT report from Mirena Radiology 29/5/24.

Overlying the left frontal convexity is a CSF density extra axial cyst consistent with an arachnoid cyst. There is no internal diffusion restriction. There is remodelling of the overlying calvarium.
The cyst measures 26mm AP x 14mm thickness x 41mm TR.

There is mild subjacent indentation of the left frontal lobe. No oedema. No solid intracranial mass.
No intracranial haemorrhage or infarction.
No abnormal diffusion restriction or SWI signal drop out.

Interpretation:

1. Left frontal convexity arachnoid cyst with remodelling of the overlying calvarium indicating this is long standing. These are typically incidental and asymptomatic.
2. No solid intracranial mass or haemorrhage.

Dr Andres Del Rio
