		MV E / E' Lat	7.2	MV E / E' Avg	7.7		

- Echo Summary**
1. Normal left ventricle size. Normal wall thickness. Normal LV systolic function. Simpson's Biplane EF = 58 %. Normal LAP.
 2. Normal left atrial volume for BSA, LA Volume/ Indexed 19 ml/m². Normal right atrial size. IAS appears intact.
 3. Mobile mitral valve. Trace mitral regurgitation.
 4. Mobile and trileaflet aortic valve. No significant aortic regurgitation. Normal aortic root and asc. aorta diameter.
 5. Right ventricle is normal in size and function. No measurable tricuspid regurgitation. Trivial-mild pulmonary regurgitation. IVC is normal diameter with respiratory variation.
 6. Tiny pericardial separation, posterior pericardium appears mildly echogenic.

Dr Stephen Hedges
North Adelaide Healthcare
202 Melbourne Street
NORTH ADELAIDE SA 5006

Dear Stephen

Re: Irena Zdziarski DOB: 28/03/1985
Medicare: 5081216348 Ref: 4 Expiry: 31/10/27

Diagnoses:

➤ Non cardiac chest pain

Medications:

➤ Nil

Irena's CT showed pristine arteries, zero calcium, no aberrancy, no plaque or stenosis. Her echo showed a structurally normal heart. She chose not to start Celebrex as she is very tablet sensitive. She has seen an immunologist.

She tells me she has previously had negative gall bladders scans and she has obviously had a normal CTPA. While we have not exactly diagnosed the cause of her pains, I suspect a musculoskeletal origin. She does feel a Voltaren occasionally helps and she can tolerate this so she is welcome to stick with that. At least, we have happily excluded a cardiovascular cause for symptoms.

Yours sincerely

Dr Ivan Straznicky
Cardiologist
