Triglyceride

Normal value: <150 mg/dL

Value

75

(NOTE)

Lipid targets are based on desirable concentration cutoffs determined from fasting individuals. In nonfasting individuals, a non HDL cholesterol concentration greater than or equal to 200 mg/dL could indicate genetic hypercholesterolemia that requires further evaluation for a secondary etiology.

If the nonfasting triglyceride concentration is greater than or equal to 500 mg/dL, a fasting lipid panel is strongly recommended.
