**MRI LEFT ANKLE**

**Summary:**

**Calcaneocuboid and medial naviculocuneiform degenerative changes.  
Plantar fasciitis.**

**Clinical:**

Left ankle pain and swelling.

**Findings:**

The chondral surfaces of the ankle joint are preserved.  
Minimal ankle joint effusion.

There is moderate degenerative change at the calcaneocuboid articulation with subarticular cyst formation.  
The subtalar chondral surfaces are intact.  
Mild chondral loss is noted at the medial naviculocuneiform articulation with subarticular cyst formation.  
Remaining intertarsal chondral surfaces appear intact.  
No tenosynovitis is seen about the ankle.  
Achilles tendon insertion is intact.  
Mild thickening and increased signal of the plantar fascia with enthesopathy change and oedema at the enthesophyte consistent with plantar fasciitis.  
The medial and lateral ligaments appear intact.
