DR BENJAMIN EDWARDS
SHED 2, 127 GREENOAKS DRIVE
COOLUM BEACH QLD 4573

Patient	MS LUCINDA ROBERTSON-FAWCETT
Date of Birth	09/02/1992
Examination	MRI Brain/Head (no rebate)
Consultation Date	07/05/2025
Films Reported	07/05/2025

Dear DR EDWARDS

MRI BRAIN**History:**

Recent mechanical fall. Denies loss of consciousness. Intermittent headaches.

Technique:

Routine MRI brain including T1 sagittal, T2 coronal, T2, FLAIR, diffusion and SWI axial.

Report:

Brain volume is normal. There are a handful of tiny FLAIR high signal foci in the supratentorial white matter, within normal limits in this age group and without diffusion restriction or susceptibility artefact. No mass, haemorrhage or surface collection. Normal grey-white matter differentiation. Normal appearance of the structures at the craniocervical junction. Normal orbital contents and pituitary gland. The craniocervical junction structures are unremarkable.

CONCLUSION:

No intracranial pathology demonstrated.

Thank you for your referral.
