ABDOMINAL ULTRASOUND

Clinical history: Lower abdominal pain and discomfort.

Comparison: None available.

Findings:

The liver is mildly fatty infiltrated. No focal lesion is seen within it.

There is no gallstone present within the gallbladder lumen. The gallbladder wall is not thickened and there is no free pericholecystic fluid. There is a negative sonographic Murphy's sign.

The common bile duct is not dilated measuring 2.9mm. There is no intrahepatic duct dilatation.

The visualised portion of the pancreas outlines normally. The portal vein demonstrates normal size and normal directional flow.

The right kidney measures 11cm in length and the left kidney 10.1cm in length. There is normal cortical thickness and echotexture. There is no evidence of hydronephrosis.

The spleen is of normal echotexture and measures 8.7cm in length.

Impression:

Mild fatty infiltration of the liver. No gallstone or biliary duct dilatation is seen.
